

IN THE SPECIFICATION:

Please replace paragraph [0025] with the following amended paragraph:

[0025] The hyper-deformable inflatable balloon 22 may be made with any material that is hyper-deformable. Latex, silicone, polyurethane, rubber (including styrene and isobutylene styrene), and nylon, are each examples of materials that may be used in manufacturing the hyper-deformable balloon. Moreover, the actual configuration of the balloon may also make it hyper-deformable. For example, the balloon may be internally ribbed 18 or notched 19 or otherwise specifically configured to increase its deformability and, thus, make it readily conformable to its surroundings in an expanded state.
